

TBK

Advanced girth-weld protection for pipes used in directionally drilled applications

The TBK Directional Drilling system is specifically designed to protect welded joints on PE, FBE and HPCC coated pipelines in directional drilling applications. In addition to providing effective protection against pull-through forces that occur during the directional drilling operation, Canusa's TBK systems provide superior corrosion protection at pipeline weld joints. The product range includes TBK-65, TBK-80 and TBK-PE, which are each designed to meet specific application conditions and operating requirements.

Multi-Layers of Protection

- Force-cured liquid epoxy applied to steel, if required, for maximum corrosion protection
- Primary sleeve composed of high shear strength adhesive, a protective heat shrinkable backing, and a pre-attached closure patch
- Sacrificial sleeve incorporated to protect the leading edge of the underlying primary sleeve during pull-through operation
- Epoxy overcoat applied at the leading and trailing ends of the joint coating to provide additional protection to the system during directional drilling

Superior Gouge and Abrasion Resistance

- Designed to mitigate the effect of forces associated with directional drilling
- Highly resistant to the effect of soil stresses and pipe movements
- Canusa's Wrapid Shield™ XL, Wrapid Shield™ XLE and HBE-DX products are provided as alternatives for added mechanical protection as an overcoat

Unique Adhesive Technology

- Allows for lower installation pre-heat temperatures and superior bonding to mainline coating
- Adhesive has been formulated to bond directly to the mainline coating; epoxy (if required) is applied to the steel only
- Lower pre-heat temperature means less time heating resulting in application time and cost

Applications

Oil & Gas

Water Pipelines

Directional Drilling

Girth-Weld Joints

TBK

Advanced girth-weld protection for pipes used in directionally drilled applications

The product information shown here is intended as a guide for standard products.

Consult your Canusa representative for specific projects or unique applications.

Sleeve Operating Characteristics		TBK-65*	TBK-80	TBK-PE
Pipeline Operating Temp.**		Up to 65°C (150°F)	Up to 80°C (176°F)	Up to 100°C (212°F)
Minimum Installation Temp.		90°C (195°F)	110°C (230°F)	130°C (266°F)
Mainline Coating Compatibility		FBE, PE, PP, HPCC	FBE, PE, HPCC	FBE, PE, HPCC
Adhesive Properties	Test Method	Typical Values		
Softening Point	ASTM E28	94°C	124°C	> 150°C
Lap Shear	EN 12068	245 N/cm ²	365 N/cm ²	> 500 N/cm ²
Backing Properties				
Tensile Strength	ASTM D638	24 MPa	22 MPa	22 MPa
Elongation	ASTM D638	700%	600%	600%
Hardness	ASTM D2240	50 Shore D	> 55 Shore D	> 55 Shore D
Volume Resistivity	ASTM D257	10 ¹⁷ ohm-cm	10 ¹⁷ ohm-cm	10 ¹⁷ ohm-cm
Abrasion Resistance	ASTM D1044	35 mg	30 mg	30 mg
Specific Gravity	ASTM D792	0.93	0.94	0.94
Sleeve Properties				
Adhesive Strength @ 23°C	ISO 21809-3	> 70 N/cm	> 50 N/cm	> 200 N/cm
Impact Resistance	ISO 21809-3	5 J/mm	5 J/mm	7 J/mm
Indentation Resistance***	ISO 21809-3	> 0.6 mm (at 60°C)	> 1.0 mm (at 80°C)	> 2.5 mm (at 80°C)
Cathodic Disbondment @ 23°C, 28 days****	ISO 21809-3	3 mm rad	3 mm rad	3 mm rad
Low Temp. Flexibility	ASTM D2671-C	> -32°C	> -26°C	> -26°C

* System can either be in 2-layer or 3-layer configuration

** Actual temperature rating is dependant on specific project requirements and conditions.

*** Residual Thickness. Test performed on 2.6 mm standard thickness sleeve as supplied.

**** As a 3-layer system

Since 1967, Canusa-CPS has been a leading developer and manufacturer of specialty pipeline coatings for the sealing and corrosion protection of pipeline joints and other substrates. Canusa-CPS high performance products are manufactured to the highest quality standards and are available in a number of configurations to accommodate many specific project applications.
